Subject: Renewable Energy Regulations

Hello,

I'm writing to urge the following:

1. Eliminate caps on solar
2. Raise the RPS to at least 5% as a start, and then to 50% by 2020.

Climate change is real and will affect us, our children and all children for generations to come. We must do what we can now to switch away from all fossils fuels and fossil fuel infrastructure and toward renewable sources of energy. Regulation is the fastest, fairest way to do this.

Thank you.
